Protect Microsoft Office 365 content with MaaS360

Microsoft Office 365 offers a user-friendly, fast and collaboration-friendly suite of applications (apps), which can be used on any device from anywhere. However, there may be better solutions for securing Office 365 content than going "all-in" with Microsoft's mobility, endpoint and identity management tools.

Scroll onward and see:

Common industry misperceptions—debunked

- Ways to secure Office 365 apps How IBM[®] MaaS360[®] with Watson[™] can help you achieve your goals—
- with capabilities that far exceed those offered solely by Microsoft Intune

tablets, laptops and desktops.

multi-factor authentication

If you need a way to...

"To secure Office 365 on all our devices, we need to go 'all-in' with Microsoft."

Myth #1:

It's not all or nothing:

MaaS360 offers proven and robust built-in capabilities for managing devices running Office 365, supporting the

complete ecosystem of Microsoft business products, including Microsoft Exchange, Microsoft SharePoint, Microsoft OneDrive for Business, Windows File Share, the Office 365 suite and Skype for Business. MaaS360 enables you to secure Office 365 apps and content on your smartphones,

• Create, manage, deploy and assign policies, including Intune Mobile Application Management (MAM), to Office 365 apps with the Microsoft Graph application programming interface (API)

- Manage Copy/Paste and Save-In for Office 365 apps Secure access to SharePoint and OneDrive for Business content Establish conditional access, single sign-on (SSO), identity federation and
- Auto-quarantine ActiveSync-connected mailboxes based on policy and compliance

Enable a secure document-editing experience across Office 365 apps

Here's what you can do without an Intune license:

Offer email, calendar and Enforce persona policies that enable contacts on devices with connectivity to Office 365

• Deploy secure mail

MaaS360 enables you to...

auto-quarantine	Add certificate support for multi-factor authentication
Offer mobile productivity tools	Deploy content management controlled by persona policies
Provide content access using SharePoint and contain data	Push a document container and/or secure browser
Stop data leakage from Office 365 apps	Apply content management data loss prevention (DLP) policies
Mvth #2:	

include what you need: Intune doesn't support modern-day use cases beyond basic MDM and MAM. Of those that it does support,

"Intune is free. I don't need to buy mobile

device management (MDM), enterprise

mobility management (EMM) or unified

endpoint management (UEM)."

Patch and update management for PCs and Apple Macs Cognitive insights and contextual analytics offered by integration with Watson SSO and conditional access to enterprise resources and apps like Office 365 Fast and easy deployments for Apple iOS, Google Android and Microsoft Windows 10

A single, secure container for email, app and content access, and DLP

Native-like app catalog experiences for all major device platforms

Integration with existing, non-Microsoft IT enterprise systems

many demand an extra cost. MaaS360 satisfies modern

The following and more are available in MaaS360 basic packaging. Intune will

either charge more for these features or does not have a way to support them.

enterprise use cases for endpoint and mobile.

One window to manage all of your smartphones, tablets and laptops

- Myth #3:
- "For strong identity management, I need to

capabilities are available as a standard offering.

Work with Azure Active Directory for directory integration, SSO and federation.

GET THE BEST OF BOTH

Combine Office 365, Intune MAM and best-of-breed UEM to secure

MaaS360 delivers mature, highly accredited, industry-leading UEM.

Full Azure Active Directory integration helps you easily manage group memberships and policies with identity management solutions, including SSO and federation. And MaaS360 can be configured as your Office 365 identity provider to establish conditional access, including identity-based application entitlement, helping you block unmanaged devices or devices connecting to Office 365 services.

migrate to Microsoft Azure Active Directory

and Microsoft identity solutions."

and manage your Office 365 apps and entitlements. Office 365 offers enterprise-grade collaboration and productivity across all endpoints.

So, use them in conjunction to satisfy all of your use cases.
